In this study, impacts of Covilli Brand Organic’s fair trade initiatives were analyzed in the rural community of Triunfo de Santa Rosa in the Empalme Valley, Sonora, Mexico. The purpose of this study was to determine whether the fair trade programs in this community were causing a positive change and supporting the United Nation’s anti-poverty Sustainable Development Goals (SDGs).

**BACKGROUND**

Fair Trade has had a significant impact on the rural community of Ejido Triunfo de Santa Rosa, and it has also greatly benefited employees of Covilli Brand Organics. Through implementation of health care services, housing and nutrition programs, the community’s livelihoods as a whole has improved, while supporting Sustainable Development Goals (SDGs) at a community level.

**RESULTS**

The majority of farm workers and community residents utilize the dental and medical services the most from the Fair Trade Clinic that opened in October 2018. The majority also believe that the medical and dental services are the most important programs that have been implemented.

“...because here in this community, we don’t have any other services available, and we have to go all the way to the city” - Triunfo de Santa Rosa Community Resident

**DISCUSSION**

Health care is the most important fair trade program for Covilli farm worker because they could provide health care for their children. The workers value the health of their children and having better accessibility of health care is making a large impact and bringing further livelihood security for many of Covilli’s farm worker families. There was also a unified consensus of the community residents, who supported the Nuchi Sansekan dental clinic and utilized it just as much as the farm workers.

**CONCLUSION**

Collaboration between governments, the rural communities, and the companies that are implementing the change are needed. Governments, donors and NGOs have promoted environmental and social certification schemes for coffee producers as certification in market channels is assumed to offer higher prices and better incomes.

**RECOMMENDATIONS**

Collaboration between governments, the rural communities, and the companies that are implementing the change are needed. Governments, donors and NGOs have promoted environmental and social certification schemes for coffee producers as certification in market channels is assumed to offer higher prices and better incomes.

**ACKNOWLEDGEMENTS**

I want to thank Covilli Brand Organics for collaborating with me for my Master’s research, and the School of Geography and Development for providing funding through the SDG’s Small Grants for Research and Engagement.
